BETWEENPSYCH.COM · OSTEOPATHY

Everything Between does

Between captures what happens between appointments and turns it into what you need for the next one: who needs you, a chart note, a program that adapts. Here is the full list, in your field's words.

For you, the professional

Less charting and fewer loose ends between appointments.

Needs you today
Only the clients who need you, with the reason: a safety flag, scores getting worse, or gone quiet.

Morning email
The same short list in your inbox each morning, only on days when someone needs you.

Session prep AI
A short read on how they have been since last time, and what to open with.

Pattern read AI
The one thread running through their weeks, and how it has shifted.

SOAP chart notes AI
Drafted from their check-ins, with blanks left for your own findings. Check, edit, done.

Dictated notes AI
Say your findings, assessment and plan; Between writes them into the note in your words.

Session recording AI
Record the appointment with the client's agreement and get the chart note. The audio is never kept.

Save as PDF or copy to chart
One tap to attach the note to any charting system.

Reports and letters AI
Progress reports, discharge summaries and letters to a doctor, insurer, school or workplace, drafted from the history.

Works with your exercise app
Already use Wibbi, Physitrack or another app? Keep it. Their check-in asks whether they did their exercises, and you see that next to their pain.

Home exercise program with AI AI
Suggestions built from their check-ins: precise doses, a clear rule for discomfort, and why each one fits.

Safety hold
When check-ins show tingling, severe or worsening sharp pain, suggestions stay gentle and flag an in-person check first.

Program review AI
What to progress, ease off, add or drop, based on what they actually did. One tap to apply.

Message your clients
Send a short note in Between, with exercises from their program attached. They read it on their check-in page and in the app, and you see when it's read.

Your clinic, your look
A welcome note from you at the top of every client's page and app. On Premium plans, your clinic's name, logo and colour too.

Trends at a glance
Pain trend on a 1–10 scale, range, check-in rhythm and recurring themes.

Where it hurts
A body-map overview of the sore spots over time, with the most affected areas.

Safety alerts
Risk language is flagged for you, and the client sees crisis resources right away.

Time saved
A running count of the minutes Between saved you this month.

Add clients from a photo or list AI
Snap a list or upload a file; Between reads the first names. Or fill today from your schedule.

Documents AI
Upload intake forms, referrals and assessments, with a short summary of each.

Next session date
Set it per client; check-ins are counted since the last one.

For your clients

A check-in takes under a minute, whenever something happens.

Voice or text
Talk or type, whichever is easier in the moment.

Pain scale or let Between estimate
Set the score, or let Between read it from what they wrote.

Body map with close-ups
Tap the area, zoom in to the exact spot, say how it feels. Man or woman figure.

Photo of the sore area
Add a picture when it helps.

Quick topics
Tap what it was about: sleep, work, a flare-up, a win.

A smart follow-up question AI
One short question when something is worth clarifying. Never about safety.

Home exercise program checklist
Tick what they did since the last check-in, with the how-to and dose.

Messages from you
Your notes and attached exercises show up on their page and in the app, without a reload.

Daily text reminders
A gentle nudge to check in, at the time they choose.

Notes to a future self
Words for a harder day, shown back when they need them. Private to them.

Their own trends
Their history and pattern, building up check-in by check-in.

Crisis resources, always
Shown instantly if a check-in sounds like a crisis. Never waits on anyone.

Any phone, no install
Works in the browser on any phone; iPhone and iPad app coming soon.

For your clinic

From one professional to a full team.

One plan for the team
One bill for everyone; add professionals as you grow.

Private caseloads
Each professional has their own login and their own clients. Nobody sees anyone else's.

Licence verification
Regulated professions are checked against their order's public registry before they see any data.

Data agreement
A written agreement on how client data is handled, ready to sign.

French and English
The whole product, for professionals and clients, in both languages.

Privacy and safety

Built for health information from the start.

AI off by default
Each client chooses whether AI summaries run. Without it, nothing they write goes to an AI.

Quebec Law 25 and PIPEDA
Designed around Canadian privacy law, with a public list of every provider we use.

Export or delete anytime
Clients and professionals can download or erase their data.

No recordings kept
Dictation and session recordings are turned into text and deleted. Audio is never used to train AI.

Two-step login
An authenticator-app code on top of the password.

Not a crisis service
Clear about what it is: crisis lines are always one tap away.

Using Between on your own

For people tracking how they are doing, with no professional involved.

Private check-ins
Mind, body, sport or eating: track what matters to you.

Goals
Up to two short intentions you keep in view.

Bring-to-a-pro summary
A clean summary to share if you start seeing someone.

Advanced stats PERSONAL PREMIUM
Month-by-month views, streaks and what tracks with harder days.

Question packs PERSONAL PREMIUM
Guided check-ins for gratitude, stress, sleep and wins.

Weekly reflection PERSONAL PREMIUM
A warm read on your week, from your own check-ins.

Make it yours PERSONAL PREMIUM
Pick your colour and choose what shows on your page, on the web and in the app.

See it for your clinic

Your clients check in by voice or text and you see the pattern before you walk in.

betweenpsych.com/osteopathy

Features marked AI use AI only for clients who have turned AI summaries on. Voice check-ins, dictation and session recording need speech-to-text to be switched on for your account.
